

–hadron correlations For the –hadron correlations presented in this analysis, we select tracks with $|\eta| < 0.8$ and $0.5 < \eta < 10$, following the studies shown in Section sec:tracking. We only consider cluster-track pairs within $|\Delta\eta| < 1.2$. Our cluster range selection is $12 < \eta < 40$, with isolation criteria of < 1.5 .

We apply the same track selection criteria described in Section sec:tracking, Table tab:track_cuts. *We present our results*
